

PORTFOLIO

E-Medical Records

2024 - 2025

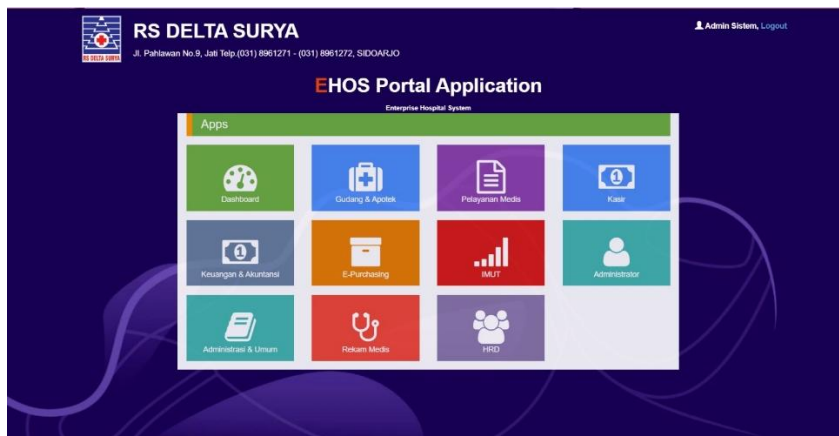

E-Medical Records is a web-based application developed collaboratively with a team to manage comprehensive patient health information, including medical history, check-up results, diagnoses, and medical prescriptions.

In this project, I was responsible for both analysis and development, starting from understanding existing medical documents and workflows provided by the hospital, as well as studying references from other medical institutions to ensure best practices and data completeness. Based on this analysis, I designed the database structure, created database migrations, and ensured data integrity across the system.

I also contributed as a full-stack developer, building the backend using Laravel to manage data processing, system logic, and integration with a legacy application. On the frontend side, I developed user interfaces using HTML, Bootstrap, and jQuery. Additionally, I optimized application performance and conducted code reviews to maintain code quality and consistency.

EHOS

2024 - 2025

Managed maintenance and development of the SIMRS eHOS application, including API development, admin panel enhancements, system performance optimization, and integration across hospital service modules to ensure stable and efficient system operations.

ERP System (Sales, Purchasing & Inventory)

2026

The screenshot shows the 'Sales Request' form in the Josella ERP system. The interface includes a sidebar with navigation options like Master, Module Inventory, Module Purchasing, Module Sales, Sales Request, and Setting. The main form has a header with 'Add New Sales Request' and fields for 'Code' (SR20260415/00002) and 'Date' (15/04/2026). Below this is a 'Detail Product' table with columns for CATEGORY, PRODUCT, JUMLAH UNIT, SATUAN UNIT, JUMLAH TERKECIL, SATUAN TERKECIL, PRICE, DISCOUNT, NETTO, SUBTOTAL, and ACTION. The table contains one row with 'Carl Kategori' and 'Carl Barang', showing values of 0.00 for quantity and price. A 'Total Qty' of 0.00 is displayed. At the bottom, there is a 'Remark' text area, a 'Subtotal' of 0.00, a 'Discount' of 0.00, a 'DPP' of 0.00, a 'PPN' checkbox, and a 'Total' of 0.00. Buttons for 'Back' and 'Save' are at the bottom right.

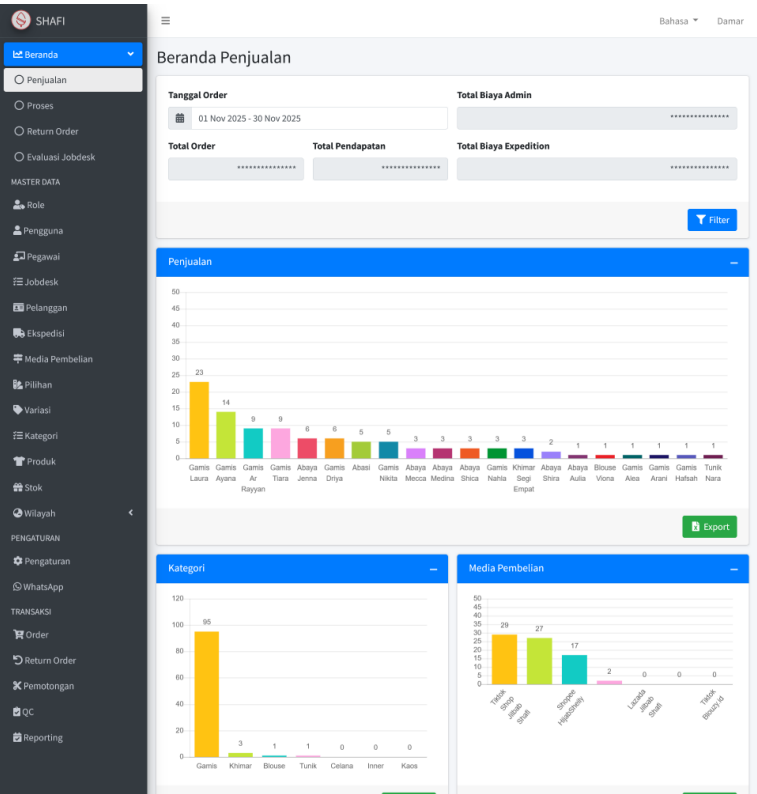

Developed and maintained ERP system for client Josella, focusing on Sales Request and Purchase Order modules, including API development, system optimization, and integration with inventory processes to support efficient business operations. Improved transaction flow between sales and purchasing modules and ensured data consistency across inventory and procurement processes.

Learning Management System (LMS) – Briton E-Learning Platform

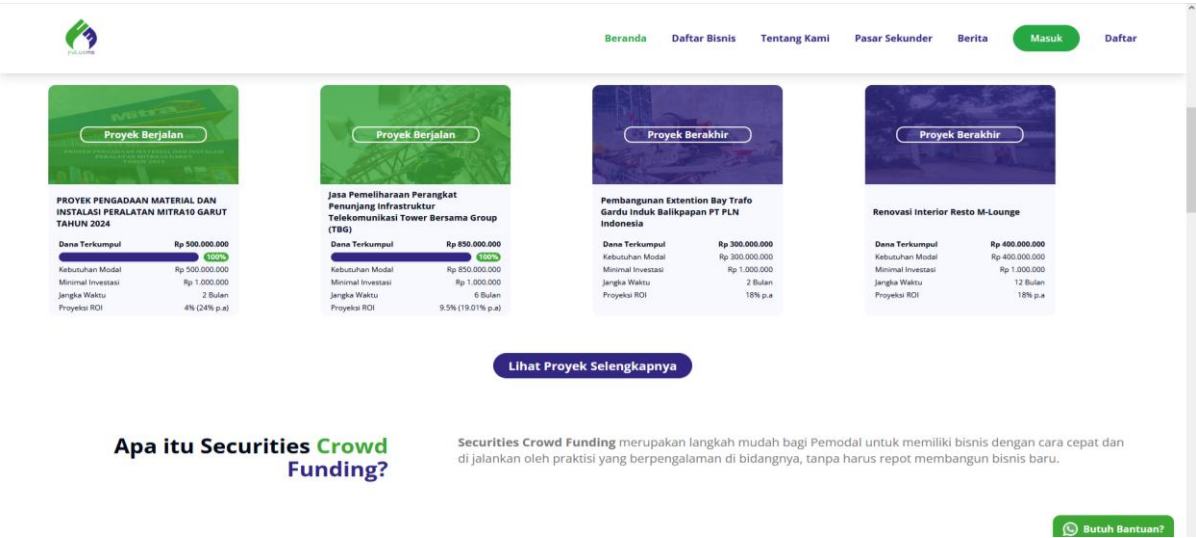

2026

The screenshot shows the 'Briton' e-learning platform dashboard for user 'Excel Alexander'. The dashboard includes a sidebar with navigation options like Dashboard, Course, IELTS, Live Classes, and Contact Helpdesk. The main area features a greeting 'Hello, Excel Alexander' and a message 'Level up your English today at your own pace'. Below this are four cards showing progress: '0 Courses Completed', '0 Classes Attended', '0 Badges', and '0 Certificates'. A large circular progress indicator shows 'English Level A2'. To the right, there is a section for 'Ace the IELTS' with a 'Get access' button, a calendar for 'April 2026', and a section for 'Upcoming live classes'. The IELTS Band section shows a radar chart with 'Listening' and 'Speaking' scores, and a 'Reading' score of 0.

Continued development of Briton e-learning platform, handling both backend and frontend, with focus on Course, IELTS, and Live Class features, while improving system performance, stability, and user experience. Enhanced system performance, reduced bugs, and improved user experience on the learning dashboard while maintaining and extending an existing production system.url : <https://onbriton.com/platform/dashboard>

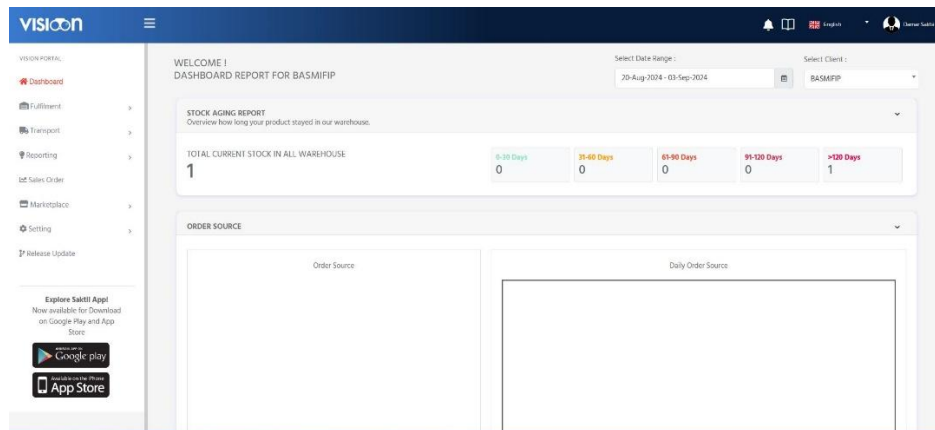

HijabSheily is a Laravel-based internal management system that handles employee management, product inventory with variations, customer and shipping data, order processing with QC workflow, and comprehensive reporting. The system integrates Telegram notifications for real-time reporting and was continuously enhanced and maintained to support evolving business needs.

Fulusme.id is the platform to facilitate collective fundraising activities (crowdfunding) based on sharia. In this project I contributed to the creation of API where the APIs are used in CMS, Web App and Mobile. In this project I also contributed to design until create tables and code deployments in development and production server.

Vision

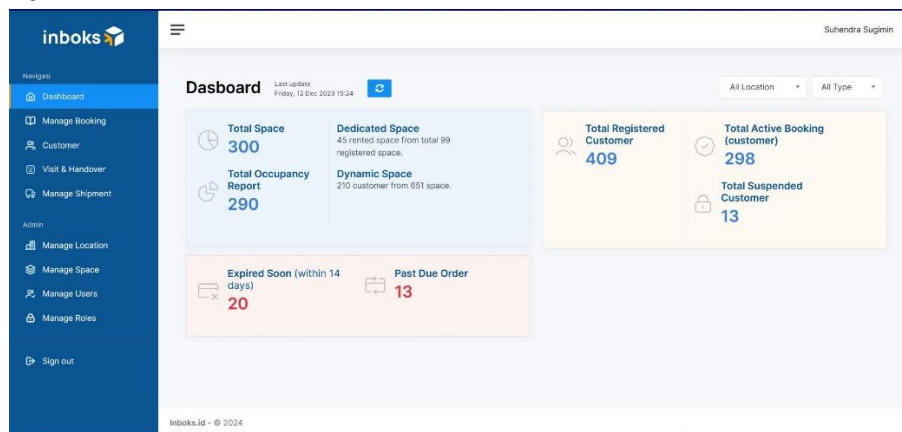

2022 - 2024

Vision is a web application intended for LODI clients to manage, monitor their goods in the Warehouse, Sales, market integration, etc. In this application I play a role in developing the web application, integration to the API and integration to the marketplace. For the API, this application uses Leanbox API v1 (using CodeIgniter 3) and Leanbox API v2 (using Laravel), where I also contribute to maintaining both API sources. This application is built using Laravel, bootstrap, vuejs and postgresql as its database.

Inboks CMS

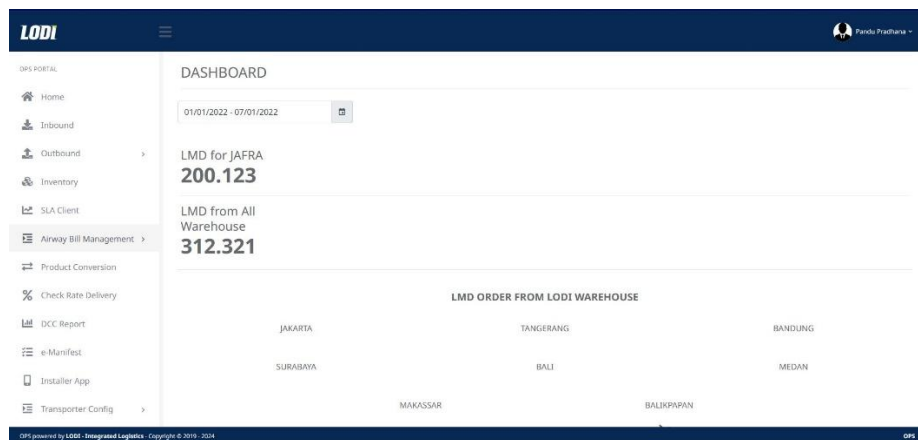

2024

Inbox is an application that serves storage of goods in the warehouse. The type of storage serves dedicated or shared storage. This CMS is intended for the Inbox internal team to manage user data, space, customers and shipping monitoring. In this project I contributed to the creation of CMS where this CMS accesses data via API created by the backend team. For this application it is built using Laravel, bootstrap, vuejs and postgresql as its database.

Operational Dashboard

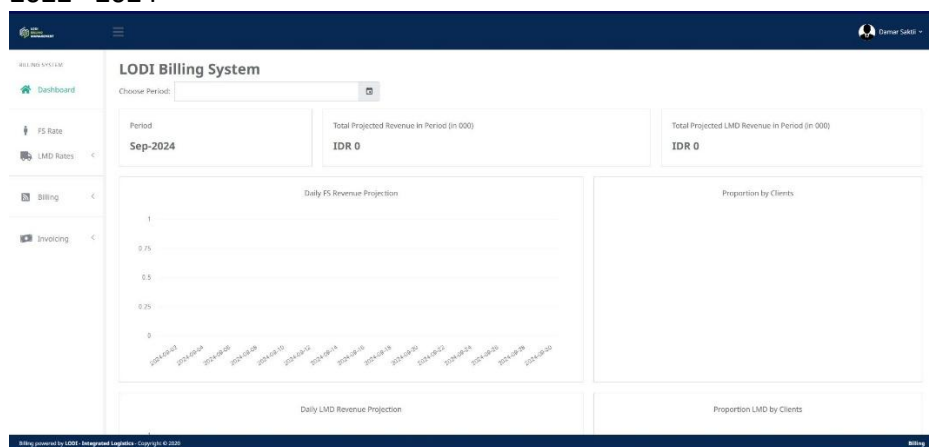

2022 - 2024

Lodi Operational Dashboard is a web application intended for the Lodi operational team to manage, monitoring the goods in the Warehouse, Transporter, Shipping, etc. In this application I play a role in developing the web application, API. For the API, this application uses Leanbox API v1 (using CodeIgniter 3) and Leanbox API v2, where I also contribute to maintaining both API sources. This application is built using Laravel, bootstrap, vuejs and postgresql as its database.

LODI Billing System

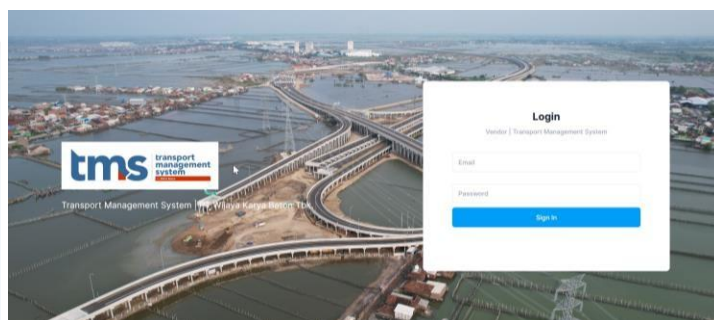

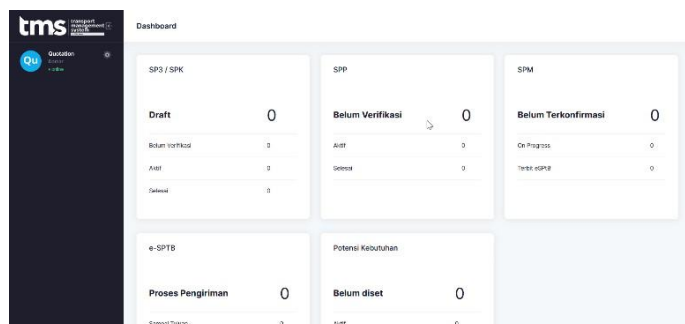

2022 - 2024

Lodi Billing is a web application that is intended to manage, monitor income for the Company, and payments for couriers. In this application I play a role in developing the web application and API. This application is built using Laravel, bootstrap, vuejs and postgresql as its database.

Transport Management System

2022

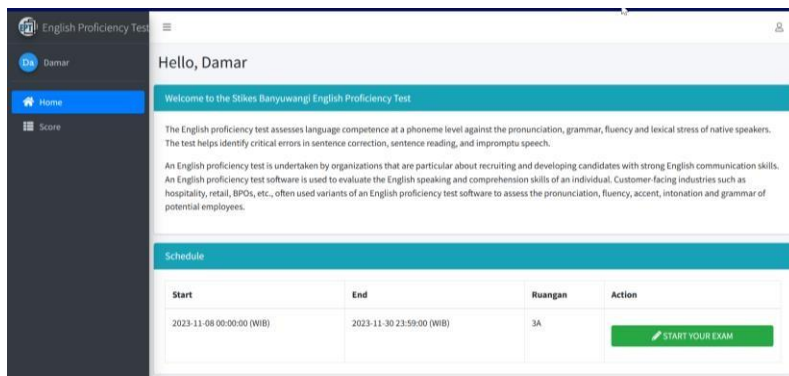

Transport Management system is a web application designed to help organize and manage transportation and logistics. We built this application using Laravel, bootstrap, jquery and oracle as the database.

English Proficiency Test

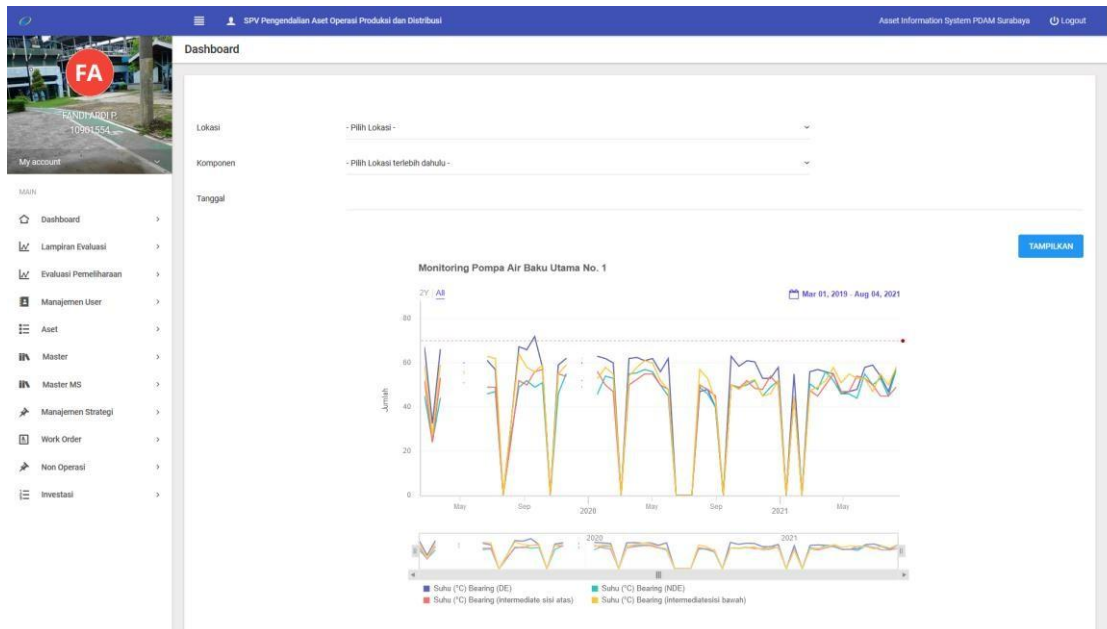

2022 – 2024

English Proficiency Test Stikes Banyuwangi is an application intended as a tryout for students before taking the TOEFL exam. In making this application there are several roles, namely admin, supervisor and students. For the exam, it is made similar to TOEFL, namely listening, structure and written expression and reading. This application is built using Laravel, bootstrap, vuejs and mysql.

Asset Management

2018 – 2022

The Asset Management Web Application that I built is intended to support the maintenance team, operational control, and planners at PDAM Surya Sembada. This application consists of a web and android application whose modules include asset data, monitoring, work orders, etc. until investment priorities. My contribution is to build a web application with Laravel, discuss and follow up on reports from the operational control team, add several tables, work with android programmers, and create a Rest API. This application is built using Laravel, bootstrap and oracle as its database.

PDAM Surya Sembada Website

2020 – 2022

The PDAM website that I manage is intended to help the Public Relations team in providing complete and easily understood information to the public. For this website, the modules include information, New Installation registration, whistleblowing, Independent Meter Recording, etc. My contribution is managing and developing web applications with Laravel, discussing and following up on reports from business analysts, and managing Rest API.URL: <https://www.pdam-sby.go.id/>
